                                                                                                                                                                                                                                                                                                                                                                                            Din/display70b-wormsceeclass-Sequence tobject=F14B6
Current sequence finishing criteria for the C. elegans genome sequence finishing criteria for the C. elegans genome sequenced constrium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones.

Exceptions are indicated by an explicit note.

In PORTANT: This sequence is Nor necessarily the entire insert of the specified clone. It may be shorter because we arrange for a small overlapping sections once, or longer because we arrange for a small once, or longer because we only sequence overlapping sections once, or longer because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone F41D3 is at 29177 in this sequence. The true right end of clone C15C6 is at 19321 in this sequence. The start of this sequence (1. .109) overlaps with the end of sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /translation-"MFSVFEWILIFFGILNWFKFTQDSTPEPASRFFTRVCQOLRETV

Claim 1: Page 1853-1855; 2084pp; English.

A computer readable medium has been developed which has recorded on it.

A computer readable medium has been developed which has recorded on it.

X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importence. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcus infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the collypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-FEB-1999 (first entry)

"The present sequence represents an expressed sequence tag (EST), and is

"The present sequence represents an expressed sequence tag (EST), and is

"The present sequence represents an expressed sequence tag (EST), and is

"The present sequences isolated from a variety of human tissue

"Sources. The EST sequences isolated from a variety of human tissue

"Sources. The EST sequences and proteins encoded by them are predicted to

have useful biological activities which would make them suitable for

treating, preventing or ameliorating medical conditions in humans and

animals, although no supporting data is given. Suggested activities

animals, although activity, immune stimulating or suppressing activity,

haematopoiesis regulating activity, tissue growth activity, haemostatic

activity, cadherin/tumour invasion suppressor activity, tumour inhibition

contitity. The EST sequences are also stated to be useful for gene

Claim 4; Page 23; 43pp; English.

Oligonuclectides which bind to interferon-gamma are useful for modulating, inhibiting or enhancing the activity or function of the TFN. Particularly, they are useful for treatment of septic shock, rheumatoid arthritis and HIV infection. Preferred oligonucleotides are given in Q81894-Q81909 and Q81913-Q81932; esp. the oligonucleotides omprise at least one of the sequences AAGUUG, UGANGCUC, Q81903 or Q81904.

Particularly for inducing or regulating protective immune response
1 particularly for inducing or regulating protective immune response
1 particularly for inducing or regulating protective immune response
2 pisclosure; Page 16; 49pp; English.

A DNA encoding a polypeptide (PP) and/or antigen (Ag), where each
coding sequence is under the control of a promoter for expression
in a non-invasive or non-pathogenic bacterium (e.g. the present
lactococcus lactis Pl promoter), can be used to transform such a
bacterium. The bacterium, which expresses the PP and/or Ag, can be
beending on the nature of the PP and/or Ag, the delivery method
can be used to regulate growth, survival, differentiation, effector
function and susceptibility to infection of cells and tissues,
Depending on the nature of the PP and/or Ag, the delivery method
can be used to regulate growth, survival, differentiation to response
tunction and susceptibility to infection of cells and tissues,
boost the immune response to tumour cells or infections that
colonise mucosal, or other tissues, modulate the immune response
gainst a pathogen, regulate infiltration of normal tissues by
inflammatory or tumour cells, ondered apoptosis in tumour cells or
down regulate the immune response in treatment of allergy,
autoimmune and other immunity related diseases. The method is
useful in human or especially veterinary medicine, with an adjuvant,
bacterium formulated as a vaccine. The bacterium can express an Ag,
particularly one of low immunogenicity, together with an adjuvant,
particularly one of low immunogenicity, together with an adjuvant,
particularly one of viokine is limited to the site of application there
production of cytokine is limited to the site of application there
should be no systemic side effects.

Example 3; Fig 6; 48pp; English.
A CDNA sequence (T03875) codes for a chloroperoxidase (R82249) of Curvularia inaequalis. The CDNA was obtd. by PCR using primers based on known sequences of the gene and by 5 FRACE. The approtetin encoded by the CDNA can be reactivated by addn. of vanadate. The CDNA can be inserted into a vector for expression in procaryotic host cells.
                                                                                                                                                                       halo:peroxidase, esp. from Curvularia inaequalis, halide and halo:peroxidase, esp. from Curvularia inaequalis, halide and halo:peroxidase, esp. from Curvularia inaequalis, halide and hydrogen peroxide source (Taim II); Fig 2, 48pp; English.

A gene (ToB0803) encoding the vanadium chloroperoxidase of Curvularia inaequalis CBS102.42 was isolated from a genomic library using a probe obtd. by amplification of cDNA using primers based on isolated fragments of the gene. The gene can be inserted into a vector and used to produce recombinant chloroperoxidase in host cells, e.g. Saccharomyces cerevisiae. The enzyme is used together with a halide source and H202 in antimicrobial compositions active against e.g. Streptococcus faecalis and food spoilage microorganisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Chloroperoxidase CDNA.

Claim 1: Page 1261-1263; 2084pp; English.

A computer readable medium has been developed which has recorded on it and other confide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcus faecalis in faction in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the collypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 99-045171704.

New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus

Saccharomyces cerevisiae DKD5D, which is sensitive to aureobasidin, was mutagenized with EMS and genomic libraries of 2 resistant strains were prepared. Resistant gene scaurlk (Q75954) was isolated from 1 library, and resistant gene scaur2k (Q75956) from the other. A DNA fragment of scaurl was used as a probe to isolate a sensitive gene, scaurls (Q75955), from the sensitive strain. A T852A mutation leading to a F158Y conversion gave rise to the sesistance of scaurlk.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Fungal chromosome integration vector contg. aureobasidin resistance gene - which acts as selection marker, useful in genetic engineering of fung 10 fung.

Bobisclosure; Page 26-28; 66pp; English.

The wild-type aureobasidin sensitivity gene scaurISR (T09350) was obtd. from a genomic library of Saccharomyces cerevisiae using a mutant aureobasidin resistance gene (T09355) as probe. The gene encodes a protein (R88127) sensitive to aureobasidin.

Mutagenesis of the gene at codon 240 resulting in a substitution, deletion or insertion at Ala-240 is used to impart aureobasidin resistance, and the mutated DNA may be used as a selectable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29-MAR-1996 (first entry)

    Disclosure; Page 67-68; 110pp; English.
Saccharomyces cerevisiae DKD5D, which is sensitive to aureobasidin, was mutagenized with EMS and genomic libraries of 2 resistant was mutagenized with EMS and genomic libraries of 2 resistant factual strains were prepared. Resistant gene scauriR (075954) was isolated from 1 library, and resistant gene scauriR (075956) from the other. A DNA fragment of scauri was used as a probe to isolate a sensitive gene, scauris (075955), from the sensitive strain. A T852A mutation leading to a F158Y conversion gave rise to the
                                                                                                                                                       04-AUG-1995 (first entry)

Furgal chromosome integration vector contg. aureobasidin resistance gene - which acts as selection marker, useful in genetic engineering of fung.

Disclosure: Page 23-24; 66pp; English.

The aureobasidin resistance gene scaurlR (T09355) was obtd. from a genomic library of Saccharomyces cerevisiae following EMS mutagenesis. Comparison with the wild-type aureobasidin sensitive gene (T09350) showed a T to A mutation at position 852, resulting in a F158Y mutation in the encoded protein (R88132). The gene may be used as a selectable marker component of chromosome integration vectors used for fungus transformation.

X20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, diagnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detection diseases related to Borrelia infections in animals, and for the production of blosynthetic products such as enzymes. Sequence 2529 BP: 589 A; 670 C; 699 G; 567 T;

CC The haloperoxidase gene (T51612) of Curvularia verruculosa CBS.63 codes for an enzyme (W12042) that shows optimum activity at about CC odes for an enzyme (W12042) that shows optimum activity at about CC 60 deg C and pH 5.5, which retains at least 75% activity after CC incubation for 1 hr at pH 7.0 and 60 deg C in the presence of 0.1% CC +1202, and which prefers bromide over chloride as substrate. It was CC isolated from a genomic library using a PCR amplified partial clone (see also T51613-14) as probe. The 2822 bp fragment in a positive CC plaque has been deposited (in pHPA+1, in E. coli DH10B) as NRRL CC =15159. The gene can be used to express the haloperoxidase in cransformed host cells for use in halide oxidation, cpd. can arranformed host cells for use in halide oxidation, cpd. CC halogenation and (with H202 and thiocyanate) as an antimicrobial. SQ Sequence 2822 BP; 651 A; 808 C; 674 G; 689 T;

parvum (IOWA isolate) genomic DNA was hydrodynamically sheared to produce fragments having a tight size distribution between 2-4 kb by Dr. Yvonne Thorstenson of the Stanford DNA Sequencing and Technology Center
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (http://sequence-
www.stanford.edu/group/techdev/shear.htm). The randomly
sheared gDNA was chromatographed on Sephacryl S-400 to
remove any small fragments and DNA eluting in the void
volume was subcloned into an EcoR V-digested, alkaline
phosphatase-treated pBlueScript II (SR-) vector and
transformed into E. coli strain XL2 Blue MRF'.
Recombinant clones from the first plating of the library
were selected for sequence analysis using T3 and T7
                                                                                                                                                                                                                                                                                                                                   Cryptosporidium parvum.

Cryptosporidium parvum.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B (R aa76-77L) (aa79-84) or (aa88-79) (laa77-76R); aa76 = E or V; aa77 = D. S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            941. They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be activate of in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rhemmatoid arthritis and lupus erythematosis. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.
Claim 17: Page 35: 41pp; Enlantsh.
This sequence represents a specifically claimed immunomodulating dimer peptide of the invention. A peptide-type compound or variant
19-JUN-1998 (first entry)
Peptide B2702.84-79/79-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunomodulating dimer peptide #3.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                       New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or

claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R anf6-77L) (aa79-84) or (aa64-79) (laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HLA-B compounds comprise amino acid sequences related to a Class I HLA-B compounds comprise amino acid sequences related to a class I HLA-B compaid domain (positions 784). They can be used to inhibit cytocxic. T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLS. They can also inhibit the proteins of interest to activate CTLS. They can also inhibit the proteins of interest to activate CTLS. They can also inhibit the confidence of the preventing rejection of transplants or for treating autoimmune used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92207-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-MAY-1996 (first entry)
HLA-B2702 CTL modulating peptide (B2702.84-75/75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.

                                                                                                                                                                                                                                                        This is a superior of the proteins of the may compared to the protein of the protein plaintenant. These sequence represents the human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the protein py 4 from a T-cell lysate. Py 4 is a T-cell surface membrane protein py 4 from a T-cell lysate. Py 4 is a T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. Py 4 is found in a limited number of cell types, but is particularly py is so found in a limited number of cell types, but is particularly py is so immunologically cross reactive with the neat shock protein assistable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B702 palindromic peptide. Compositions comprising the extracellular fragment of py4 combined with HLA-B2702.60-84 (see R95416), indices calcum influx, and inhibits compositions comprising the mount of binding between the candidate compound and py4. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the containing T-cells and antigen presenting cells (APCS), by adding to the containing the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ij

Triangly autonominute diseases.

It is sequence represents a specifically claimed immunomodulating dimer to peptide of the invention. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acids, where the peptide-type compound comprises the formula acquired and/or C-terminal amidated or estarified forms of up to 60 amid acids, where the peptide-type compound comprises the formula A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and a represents amino acid; The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HA-B alphal domain (positions 79-84). They can be used to inhibit cyctoxic ripmonocytes (CTL) from undesirably attacking cells in a host or in proteins of interest to activate CTLs. They can also inhibit the proteins of interest to activate CTLs. They can also inhibit the profice of or proteins of interest to activate CTLs. They can also inhibit the close of or seventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R82207-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HLA-B2702 CTL modulating peptide (B2702.84-75/75-84(T)). Cytocoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PPI; 95-35882/46.

                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                    HLA-B2702 CTL modulating peptide (B2702.84-75(T)/75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC;
immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                      Example 15; Page 36; 80pp; English.
R83061-R83085, R83096 and R92907-F92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (comparate to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New immunomodulating dimer peptide(s) - based on a class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases. Example 1; Page 19; 41pp; English. Peptides W33784-98 and W33778-9 were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   19-JUN-1998 (first entry)
Peptide B2702.84-75Ty75-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                 Extension of acceptance period of transplants from MHC unmatched donor hosts - using Class I 975-84\ \mathrm{MHC} antigen of the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .;

Assay for alpha-2b adrenergic receptor ligands - using membranes of cells expressing recombinant receptor
Disclosure: Fig 2A-E; 16pp; English.
Human alpha-2B adrenergic receptor (Wil804) is a member of the rhodopsin-like signal transducer family. Its amino acid sequence was deduced from a genomic DNA clone (T59499) obtd. from a human spleen DNA library. Vectors have been adapted to allow prodn. of alpha-2B adrenoceptor in bacterial, yeast or mammalian cells; transfected Ltk- cells, designated L-NGC-alpha-2B, are deposited as AVCC CRL 10275. Membranes of transfected mammalian cells an novel methods to identify drugs which specifically interact Sequence 487 AA;
 Discioure, Fig 2; 15pp; English.
Clone NGC-alpha2beta was isolated from a human spleen genomic
Library by screening with a fragment of the human 5-Hirb receptor
gene. The gene was used to express recombinant receptor protein
which can be used to produce antibodies for inhibition of receptor
 Isolated DNA encoding human adrenergic receptor - for detecting nucleic acids encoding alpha, 2-beta adrenergic receptor, for screening drugs.

 Will 31-1940.7(2).

Tomposns. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example 12: 29pp: English.

R95413, and R95415-R9543 represent palindromes and fragments of human-leucocyte-associated antigens. This sequences can be used too the activity of a protein p74 from a T-cell lysate. P74 is a T-cell surface membrane protein p74 from a T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein CT as as a laso immunologically cross reactive with the heat shock protein R970. P74 is found in a limited number of cell types, but is particularly expressed on B and T cells. P74 can be isolated by lysis of a suitable cell with an amphototric detergent, and then passed through an affinity column containing a covalently bound HA-B2702 palindromic affinity column containing a covalently bound HA-B2702 palindromic combined with HA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis.

Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound can determining the amount of binding between the candidate compound companient of TL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount candidate composition companies with p74 for the binding of the p74 ligand.

Example 2: Page 72-73: 99pp: English.

Example 2: Page 72-73: 99pp: English.

The present sequence represents a human neuronal nicotinic acetylcholine receptor (NAChR) subunit. The cells expressing the alpha and/or beta receptor (NAChR) subunit. The cells expressing the alpha and/or beta nethod of screening compounds to identify any which modulate the activity of human neuronal NAChR.

Subunit specific antibodies may be used to monitor the distribution and expression density of various subunits in normal vs diseased brain tissues. Testing of single receptor subunits or specific receptor subunit combinations with a variety of potential agonists or antagonists provides information with respect to the function and activity of the individual subunits and should lead to the identification and design of compounds that are capable of very specific interaction with one or more receptor subtypes. The resulting drugs should exhibit fewer that express a variety of subtypes.
Human neuronal nicotinic acetylcholine receptor alpha-3 subunit.

Pricobacter pylori nucleic acid sequences and encoded polypeptide(s) - useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection and to diagnosis of H. pylori infection and the sequence of a H. pylori cell envelope flagellar protein. This is the sequence of a H. pylori cell envelope flagellar protein. The protein may be used in a vaccine to prevent or treat H. pylori life cycle activators or inhibitors. The protein as potential H. pylori life cycle activators or inhibitors. The DNA and probes derived from it may be used for the identification of the pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and can be used to prevent the translation of H. pylori mRNA. Antibodies and against the protein can be used in immunoassays to evaluate the abundance and distribution of H. pylori actions. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for significant homology to other known or exported coding regions are analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR by analification for recombinant polypeptide production, e.g. in E. coli
 protein.
